EXPERIENCE

- **Company Name** Location
Job Title (Intern / Junior / Assistant) *Start Date – End Date*
 - **Key Project or Achievement:** Describe what you did using action verbs. Focus on the 'how' and the result (e.g., optimized X using Y, resulting in Z% improvement).
 - **Technical Implementation:** Detail the specific engineering tools or methodologies used (e.g., CAD modeling, Python automation, Circuit design).
 - **Collaboration:** Mention working in agile teams, presenting to stakeholders, or leadership roles.
 - **Tech Stack:** List specific tools used for this role (e.g., SolidWorks, MATLAB, AWS, Java).
- **Previous Company** Location
Relevant Internship/Role *Dates*
 - **Project Name:** Built a [system/tool] that [solved problem]. Used [Methodology] to achieve [Quantitative Result].
 - **Tech Stack:** Tool 1, Tool 2, Framework X.

EDUCATION

- **University of British Columbia** Vancouver, Canada
BASc in Computer Engineering *2025-2030*
 - **Relevant Courses:** Computing Systems I/II, Signals and Systems, Circuit Analysis I

PROJECTS

- **Upcoming Design Team: UBC Orbit or ThunderBikes:** Describe the technical challenge, your specific contribution, and the outcome. Highlight engineering tools like Spice, AutoCAD, or specific programming languages.
- **ATMega328P Bare-Metal Programming:** Abandoned the Arduino IDE to develop bare-metal firmware in C. Enhanced my knowledge of memory management, bitwise operations, and low-level programming.

TECHNICAL SKILLS

- **Languages:** C, C++, Java, Python
- **Engineering Software:** MATLAB, AutoDesk Fusion, Quartus Prime
- **Developer Tools:** Git, Linux, FreeRTOS
- **Theoretical Knowledge:** Digital Design, Mixed-Signal Design, Computer Architecture, ML/AI, Embedded, Signal Processing.
